★ BMS

Lithium batteries manufactured by wirentech are optimized by its battery BMS, through monitoring cells, to provide protection against overcharge, over discharge, short circuit.

The BMS helps to ensure safe and accurate operation.

★ HEAVY DUTY BUSBAR **NEW**

Copper busbar, which expands the contact area between copper bar, breaker and module, adopts the technique of high-temperature chemical nickel plating. It performs well in electrical and thermal conductivity, corrosion resistance and low internal resistance and ensures stable performance, large space and simple repair.

*Note: The default BMS in the module allows for 100A charging current maximum. To achieve higher charging currents, please navigate to <https://www.wirentech.com> for the most up to date firmware. Please also make note that if the battery firmware is updated to allow 200A maximum charge, the internal thermal sensors will throttle the charge current to what the BMS deems necessary to prevent overheating.
